

- 1. I need assistance determining specific numbers of events (i.e. outcome events, CVD events, heart failure, stroke, etc) broken up by demographics.**

Unfortunately, the CRIC Opportunity Pool program is unable to provide this type of preparatory analysis. Applicants are encouraged to use available resources (publications and CRIC DataView) to estimate event counts as best as possible. Please note that CRIC DataView has been updated to include outcome event data.

- 2. Can you provide clarification on “the use of study samples for new laboratory testing or any new data collection from study participants” is not allowed. Does this refer to participants in the CRIC Study only? Could a cohort of samples outside of CRIC be used to corroborate the CRIC analysis?**

The CRIC Opportunity Pool resources will not support new laboratory testing, regardless of whether the samples come from CRIC or a cohort outside of CRIC.
